

ComputerEase Puts An End To The Paper Chase With Electronic Document Routing And Approval.

Now you can throw out all unnecessary paperwork using the new electronic document routing and approval system.

ComputerEase is ending the paper chase in contractors' offices. The best project managers can waste 6 to 8 hours a week chasing down paperwork. Paper creates strife and wastes valuable time. The leading provider of construction accounting and project management software now offers FieldEase.

One of the fastest growing technologies in the construction industry is remote, job-to-office communication using Tablet PC technology. In 2008, ComputerEase introduced FieldEase for the Tablet PC. "FieldEase gives contractors yet another important tool to help streamline operations between the office and the worksite while adding dollars to the bottom line," says John Meibers, President of ComputerEase.

For about \$1000, a contractor can purchase a Tablet PC that accepts electronic handwritten data entry and easily interfaces with the home office computer. "The Tablet PC is, in fact, the size of an 8½" x 11" writing pad," Meibers points out.

"It functions as a stand-alone portable PC as well as a device that recognizes hand written messages. This information is converted into electronic data files, making data entry possible without a key pad."

Tablet PC technology is quickly replacing the small, handheld PDA devices, says Meibers. "While these handheld devices have made headway in remote processing, the small keyboard and tiny screen (about the size of a deck of cards) make it difficult for practical use in the field. Project managers and field supervisors have been demanding a larger, more powerful device."

"FieldEase for the Tablet PC gives field supervisors an easy and efficient way to enter data using simple handwritten input. Most processing is done without even touching a keyboard," Meibers points out, noting that several applications are coming onto the market which rely on electronic handwritten technology.

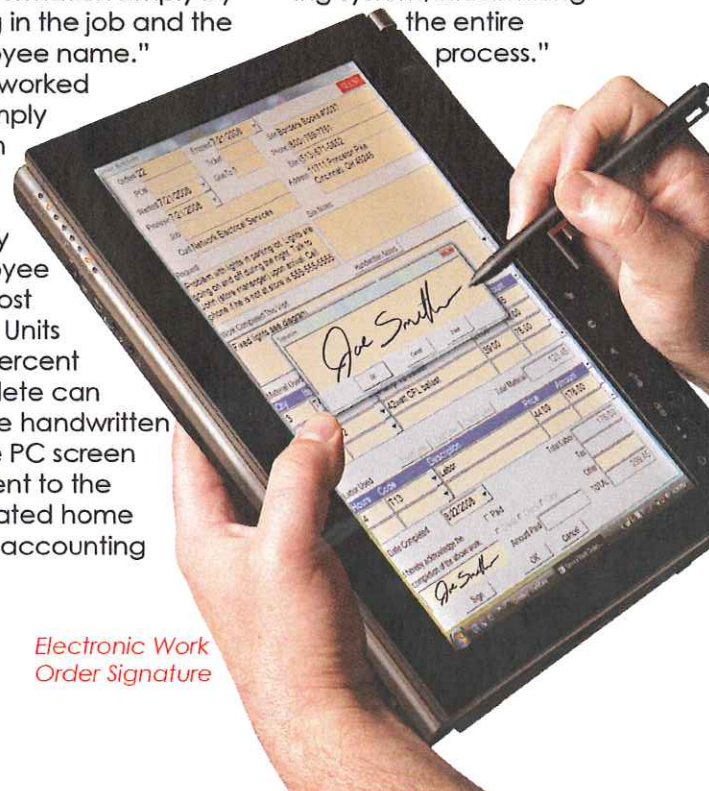

"With FieldEase, everything is now done electronically. Our superintendents don't have to make a special trip to the office. Using FieldEase, the data goes straight into the accounting system streamlining the entire process."

Purchasing and Payroll Manager
Jostin Concrete

One of the most convenient new features in FieldEase is handwritten, custom timesheets that can be prepared in the field daily and emailed back to the payroll accounting system in the home office. "This eliminates dual entry in the accounting system and ensures timely job costing and payroll preparation," says Meibers. "The supervisor uses either drop down boxes containing employee and job information from the home office, or enters the information simply by writing in the job and the employee name." Hours worked are simply written under each day by employee and cost code. Units and percent complete can also be handwritten on the PC screen and sent to the integrated home office accounting

system for job costing and billing preparation.

"Prior to using FieldEase, all of our time was turned in manually," Jenny Jones, purchasing and payroll manager for Jostin Concrete said. "Our project managers wrote everything on paper and there was quite a bit of double-entry. With FieldEase, everything is now done electronically. Our superintendents don't have to make a special trip to the office. Using FieldEase, the data goes straight into the accounting system, streamlining the entire process."
